Complications in Arthroscopic Shoulder Instability Surgery

Eric C. McCarty, M.D.
Associate Professor, Dept. of Orthopaedics
Chief, Sports Medicine and Shoulder Surgery
Head Team Physician, University of Colorado

SPORTS MEDICINE

Speaker Disclosure

Disclosure Information
The following relationships exist:

Stryker, Smith Nephew - Institutional Support

Biomet Sports Medicine - Consultant, Royalties

Elesevier - Book Royalties

DJO – Royalties for Sling

- **Thanks to Dr. Ben Shaffer for many images and slides**

Complications Uncommon, but….

Complications

- **Pre-operative**
- **Operative**
- **Post-operative**

Pre-operative Complications

Poor Patient Selection

- More critical to consistent outcomes than surgical ability/technique
- Inability to identify Psych/social issues

Pre-operative Complications

Incorrect Diagnosis

- Problems occur with incorrect and/or incomplete diagnosis

Pre-operative Complications

Comcomitant Medical Problems

Lack of Appropriate Imaging

Operative Complications

Anesthesia

- Interscalene Blocks
  - Neurological damage
  - Phrenic nerve
  - Hematoma
- Hypotension

Operative Complications

Positioning

- Pressure Points
  - Axilla, knee, genitals
- Traction Injury
  - neuropraxia
- Neck Injury

Operative Complications

Technique

- Portals

Operative Complications

Technique

(Inadequate visualization)

- Unrecognized HAGL
  - Index of suspicion in unstable shoulder w/ seemingly intact labral glenoid attachment
  - Look for exposed subscapularis muscle

Operative Complications

Technique

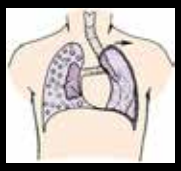
(Inadequate visualization)

- Inadequate pressure from pump or gravity
- Bleeding

Operative Complications

Technique

- Excess Fluid
  - Extravasation with deviation of trachea



Operative Complications

Technique

- Damage to Articular Surfaces

Operative Complications

Technique

- Improper Anchor Placement
  - Too Medial on Glenoid
  - Not Deep enough into Bone

Operative Complications

Technique

- Improper Anchor Placement
  - Not Enough Anchors (need at least 3 for most ant. Stabilizations)
  - Failure to repair to the 5 – 6 o'clock position

Operative Complications

Technique

- Anchor Migration/Fragmentation

Operative Complications

Technique

- Inadequate Implant Strength

Operative Complications

Technique

- Suture Problems
  - Breakage
  - Fraying
  - Tangled Suture
  - Unloading of Anchor
- Knot Problems
  - Slippage
  - Placement on Articular Side

Operative Complications

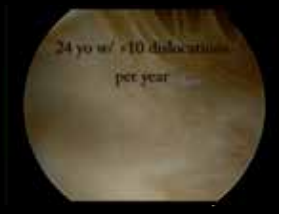
Technique

- Instrumentation Breakage

Operative Complications

Technique

- Poor Capsular Tissue
- Poor Bone Quality



Operative Complications

Technique

- Inadequate Restoration of Capsular Tension

Operative Complications

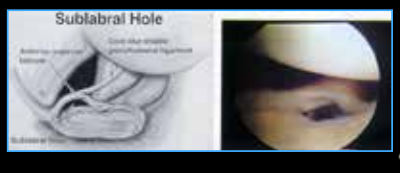
Technique

- Inadequate Glenoid Preparation

Operative Complications

Technique

- Overtreatment
  - Fixation of sublabral foramen, buford



Operative Complications

Technique

- Overtreatment
  - Overtightening

Post-Operative Complications

Infection

Non-compliance

Post-Operative Complications

Too Aggressive Rehab

Lack of Appropriate Rehab

Post-Operative Complications

Premature Return to Activity

Post-Operative Complications

Stiffness

- Adhesive Capsulitis
- Overtightening
  - May lead to constraint on joint and DJD

Summary Complications

- **Pre-operative**
  - **Appropriate patient and indications**
- **Operative**
  - **Appropriate technique, set-up, instrumentation, implants, skill**
- **Post-operative**
  - **Rehabilitation and compliance**

Thank You
