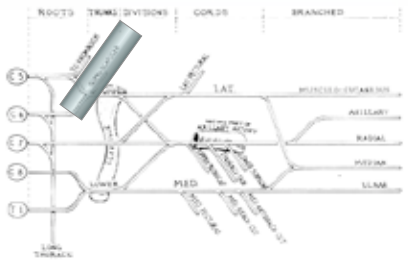
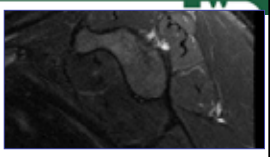
Neuroanatomy:
Upper Trunk of the Brachial Plexus (C5, C6)



…50% have contributions from C4

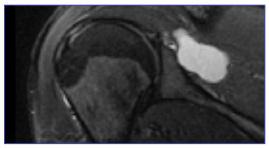
Suprascapular Neuropathy

Most frequently injured peripheral branch of the brachial plexus in athletes



Potential Cause of Shoulder Pain and Weakness

Diagnosis often overlooked



Scapular Notch

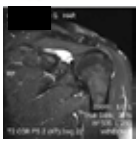
Acute Pain → Weakness

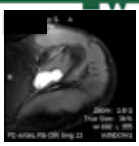
Referred to Lateral Shoulder (RCT)

Repetitive Trauma
- Sport
- Work

Extrinsic Compression: Spinoglenoid Notch

SLAP Tear
- -Ganglion cyst
- One way valve





Similar to Meniscal Cyst

Labral Injury
- Split
- Separation

Spinoglenoid Notch

More Insidious Onset

Pain over the Notch

May present with symptoms of "instability"

Can have positive crossed-body adduction test

Pathophysiology:
How does the nerve get injured?

- Traction
- Microtrauma
- Trauma
- Iatrogenic
- Osseous stenosis
- Extrinsic Compression
- Rotator Cuff Retraction

Massive Rotator Cuff Tear

Suprascapular nerve anatomy during shoulder motion: a cadaveric proof of concept study with implications for neurogenic shoulder pain

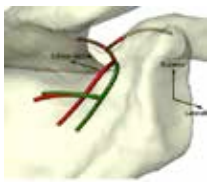
Daniel F. Mazzocca, MD[a,b], Anshu Singh, MD[a], Jessica M. Wells, BA[a], Guoan Li, PhD[a] Jon JP. Warner, MD[a,b]

-Position of the suprascapular nerve tracked using biplane flouroscpy

-Nerve translated 3.5 mm medial at spinoglenoid notch with simulated tear

-Anatomic repair restored nerve position

-Transverse Scapular ligament release allowed displacement of nerve out of scapular notch



Suprascapular Nerve Release

The association of suprascapular neuropathy with massive rotator cuff tears: A preliminary report

Reversal of Suprascapular Neuropathy Following Arthroscopic Repair of Massive Supraspinatus and Infraspinatus Rotator Cuff Tears

Diagnosis

Pain over the posterior-superior shoulder

Physical Exam:
- -Weakness (External Rotation/Forward Elevation)
- -Provocative Testing

Diagnostic Testing
- -MRI
- -EMG

Suprascapular Nerve Stretch Test

Elicit pain with stretch of SSN
- Contralateral Head rotation
- Shoulder Retraction

Diagnose compression that occurs only in stretched position

Arthroscopic suprascapular nerve release: indications and technique. Lafosse L, Piper K, Lanz U. J Shoulder Elbow Surg. 2011 Mar:S9-13.

Diagnostic Tests

Flourscopic Guided Injection to the scapular notch.

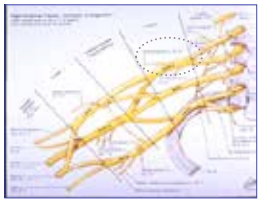
EMG

Denervation Potentials

Fibrillations

Spontaneous Activity

Prolonged Motor Latencies



…NEGATIVE EMG does not rule out suprascapular neuropathy

May still be candidates for suprascapular nerve release

MRI

Location of Cyst

Associated Pathology

Muscle Atrophy

Fatty Infiltrates

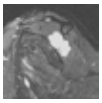
Selective Diagnostic Injection

When Do We Decompress: Current Indications

Entrapment
- -Overhead athlete
- -Posterior/Superior Shoulder Pain
- -Weakness/Atrophy SS and IS
- -EMG Positive

Spinoglenoid Notch Cyst
- -Posterior Shoulder Pain
- -MRI Positive



Rotator Cuff Tear?
- -Large or Massive Tears SS/IS
- -Revision Situations
- -Pain or Atrophy out of proportion to the Tear
