CASES: DISTAL FEMUR & PLATEAU

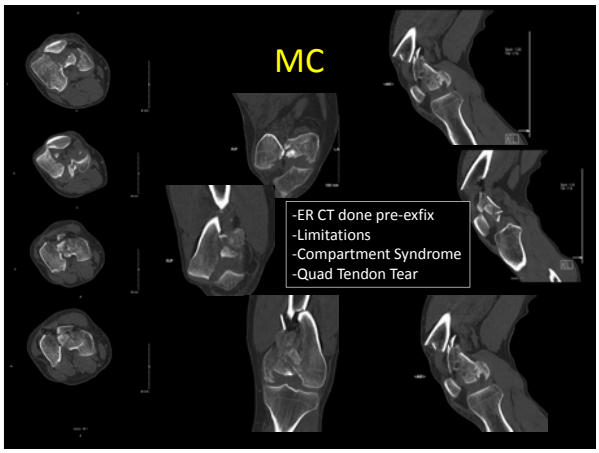
Frank A. Liporace, MD
Associate Professor – Dept. of Orthopaedics
Director – Orthopaedic Trauma Research
New York University / Hospital for Joint Diseases, NY, NY

Chairman– Dept. Of Orthopaedics,
Jersey City Medical Ctr / RWJ Barnabas Health

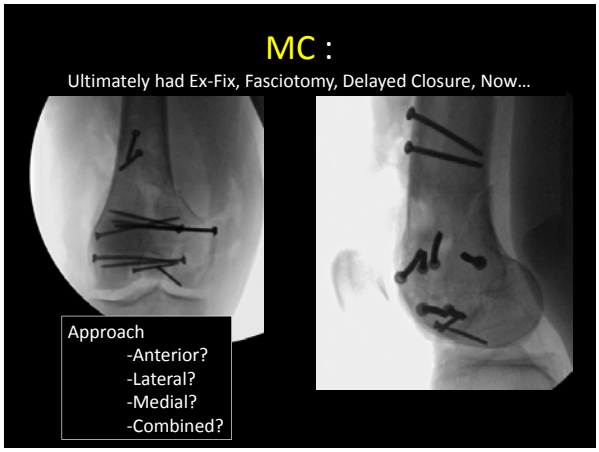
Distal Femur

Case 1: MC – 25 foot fall

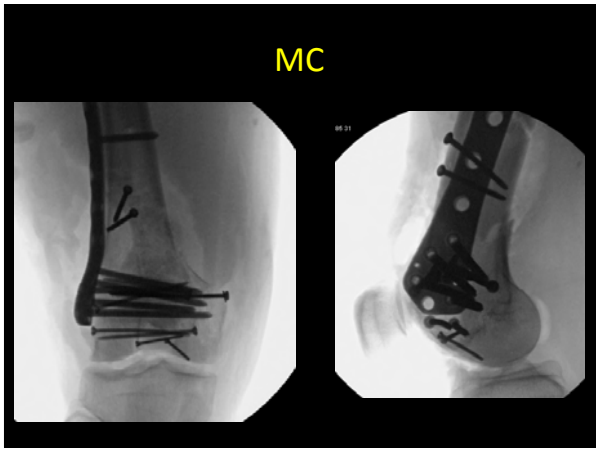
What to do first?
Ex-Fix?
CT?



MC
-ER CT done pre-exfix
-Limitations
-Compartment Syndrome
-Quad Tendon Tear



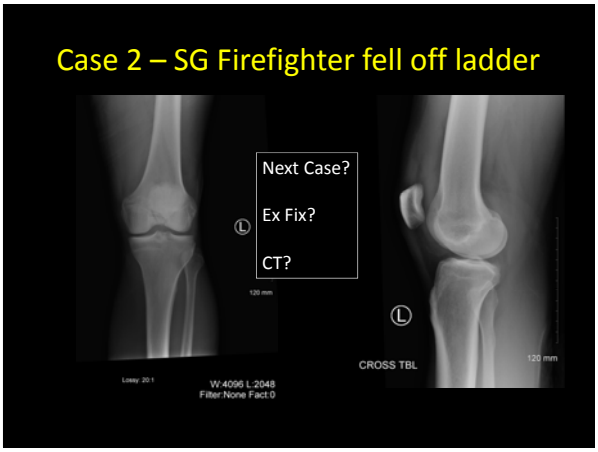
MC :
Ultimately had Ex-Fix, Fasciotomy, Delayed Closure, Now…
Approach
-Anterior?
-Lateral?
-Medial?
-Combined?



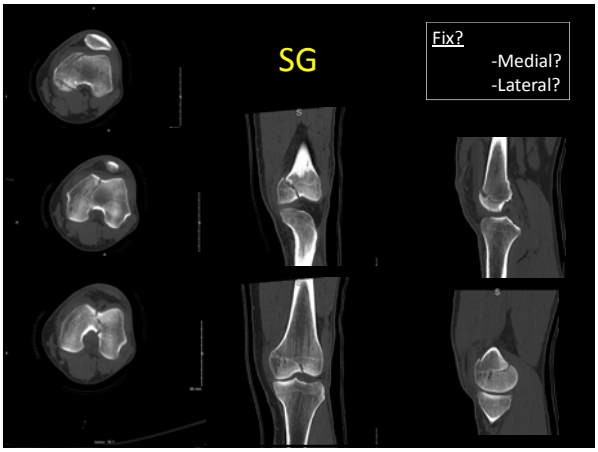
MC

MC

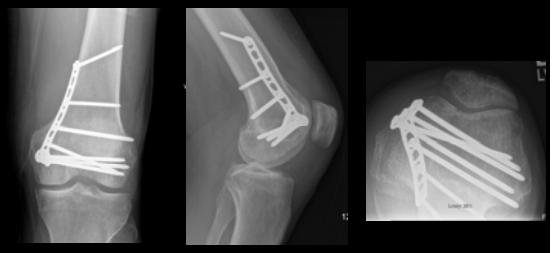
Case 2 – SG Firefighter fell off ladder



SG



SG - Subvastus



Case 3: JV – 75 yo male

-3 time failed distal femoral nonunion

-ALL surgeries with lateral plate

-Previous Hip Fx short hip IMN above

-SOLUTION ???

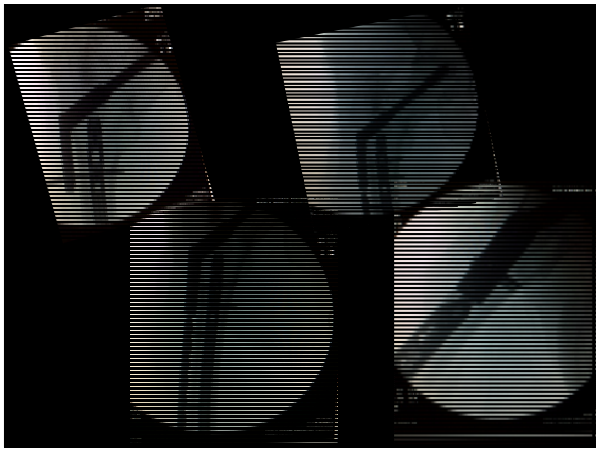
STEP 1 – BIOPSY (significant history)

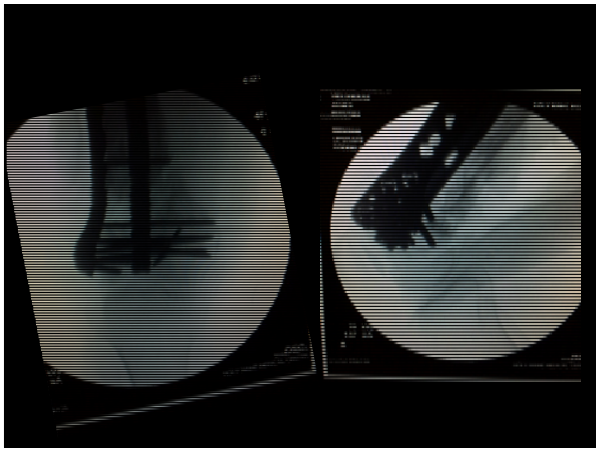
NOTE ALLOGRAFT FIBULA INTRAMEDULLARY STRUT ?!?!?!?!?

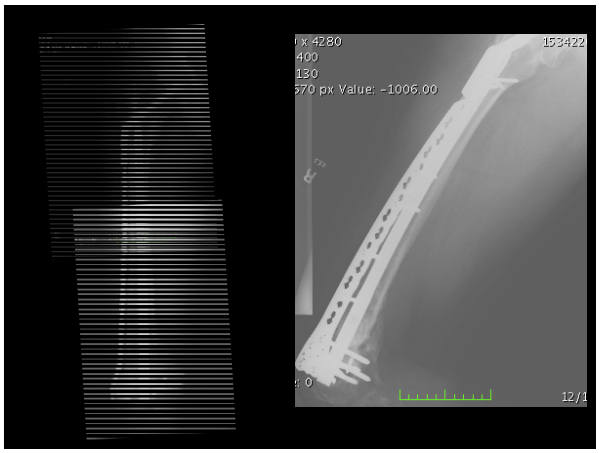
NEGATIVE FOR INFECTION

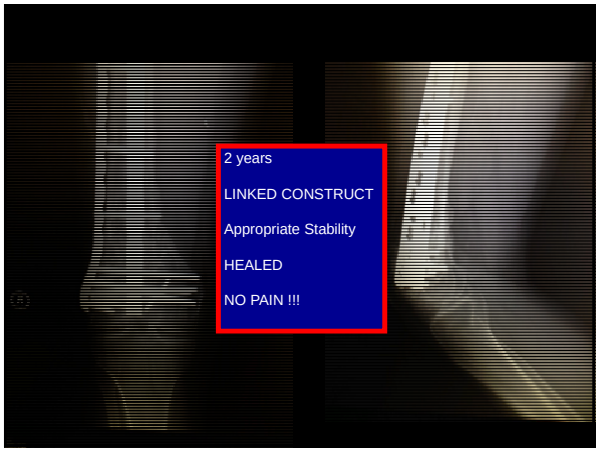
Biopsy Results – Not Infected

- What to do?
  - 1) Repeat Lateral Plating with Compression
    - Possible Blade
  - 2) Dual Plate
  - 3) Retrograde Nail
  - 4) Other

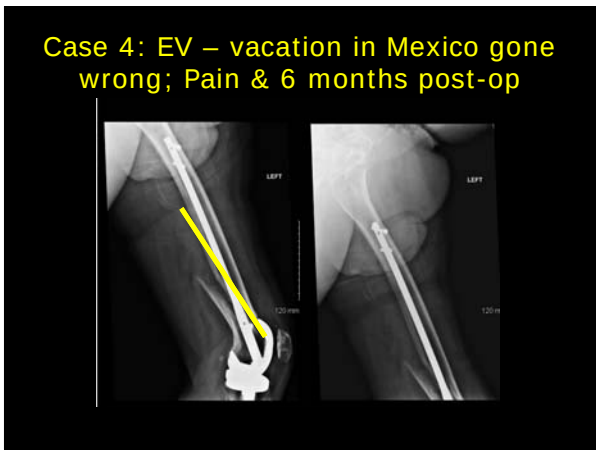








2 years
LINKED CONSTRUCT
Appropriate Stability
HEALED
NO PAIN !!!

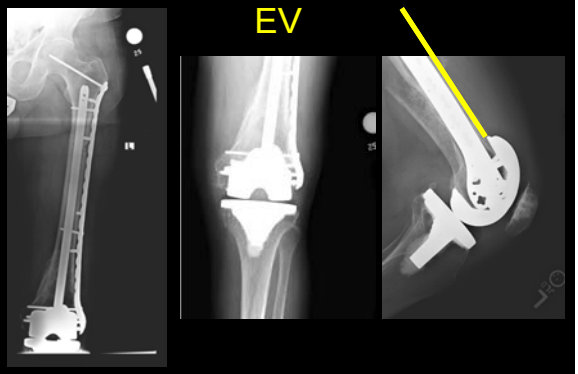


Case 4: EV – vacation in Mexico gone wrong; Pain & 6 months post-op

EV

Now what?
-Bone Graft in situ?
-Change to Plate?
-Re-IMN?
-Revision TKR?
-Other?

EV

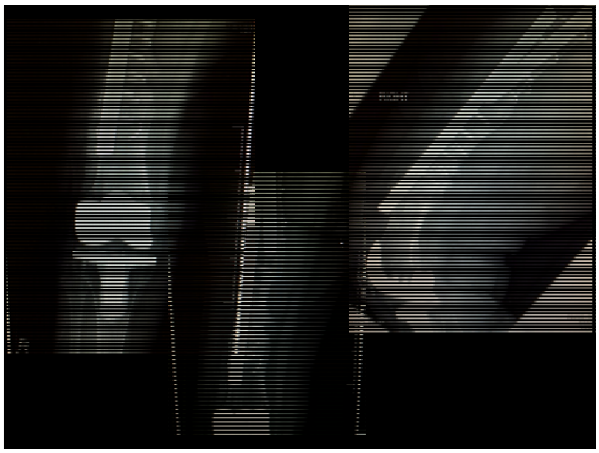


Case 5: JZ

Distal Femoral Fx 10 yrs ago w/ 4 time nonunion
s/p platings above TKR & below THR

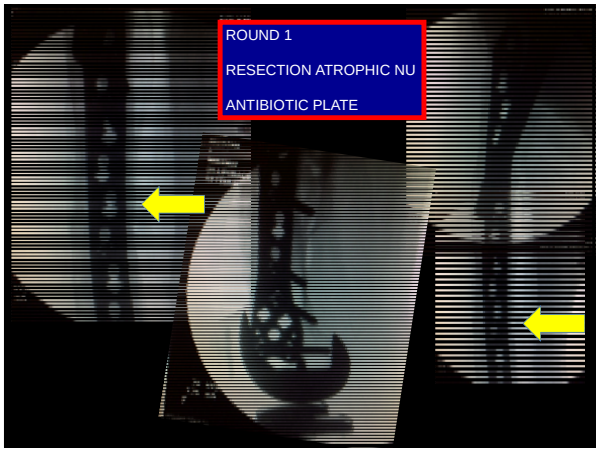
Non-ambulator x 2.5 years

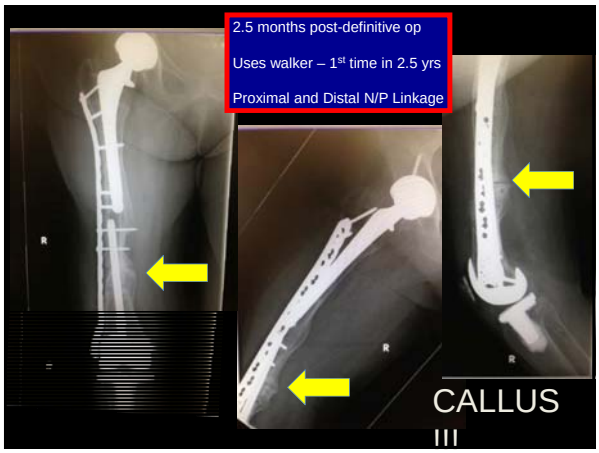
***BIOPSY → INFECTED



Biopsy Results – Infected

- What to do?
  - 1) I&D with acute fixation and post-op antibiotics
  - 2) I&D then picc / antibiotics → 6 wks re-ORIF
  - 3) Resection of both joints with #2 + arthroplasty replantation
  - 4) Other

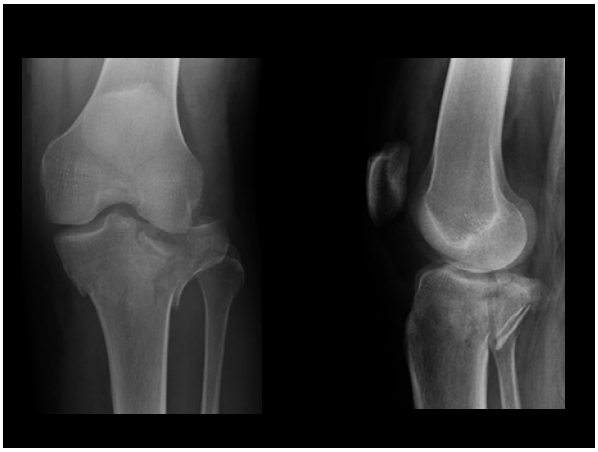




Tibia Plateau

Case 1

- 52 yo active male
- s/p Pedestrian Struck
- Isolated injury
- No NV deficits

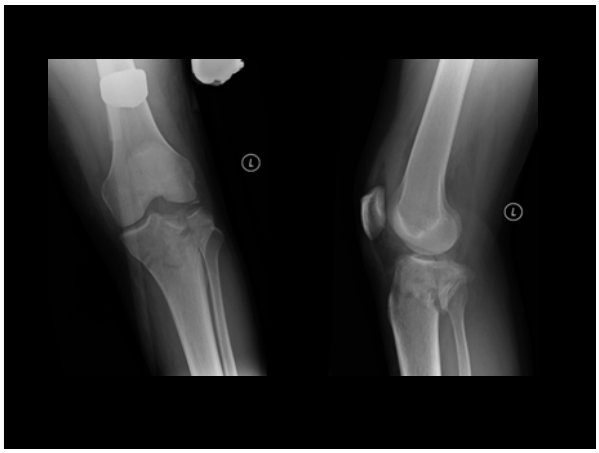


Case 1

- What would your management be?
  - 1) ORIF within 6 hours
  - 2) CT scan, ORIF within 2 days
  - 3) External Fixation, CT scan, ORIF ~ 1 wk or more
  - 4) External Fixation, ORIF when time available
  - 5) Closed Management

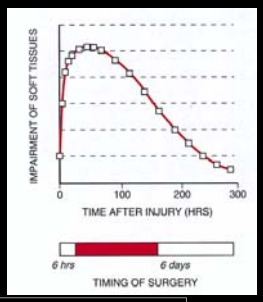
Case 1

- What would your management be?
  - 1) ORIF within 6 hours
  - 2) CT scan, ORIF within 2 days
  - **3) External Fixation, CT scan, ORIF ~ 1 wk or more**
  - 4) External Fixation, ORIF when time available
  - 5) Closed Management

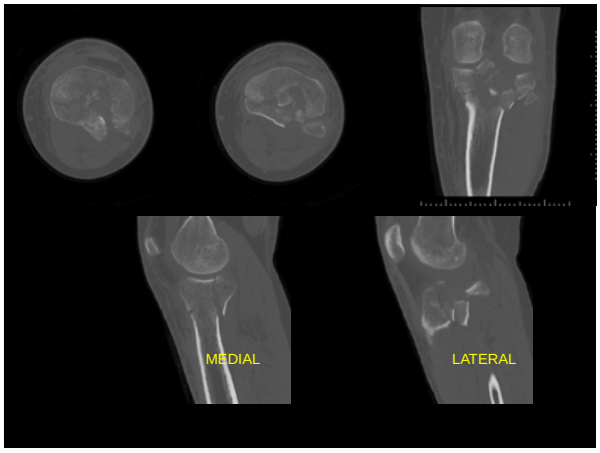


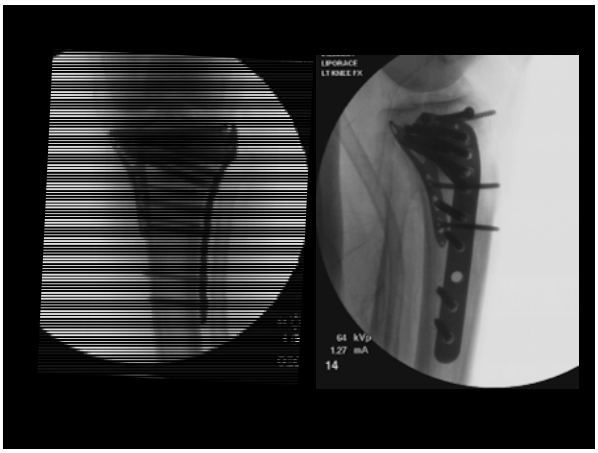
Case 1

- Patience
- Timing critical
- Avoid 1-6 days
- Await soft tissue envelope (10-21 days)



Note: Highest wound complications <7 days after injury (tibia plateau fractures) Wagner HE and Jakob RP: Unfallchirurg 1986

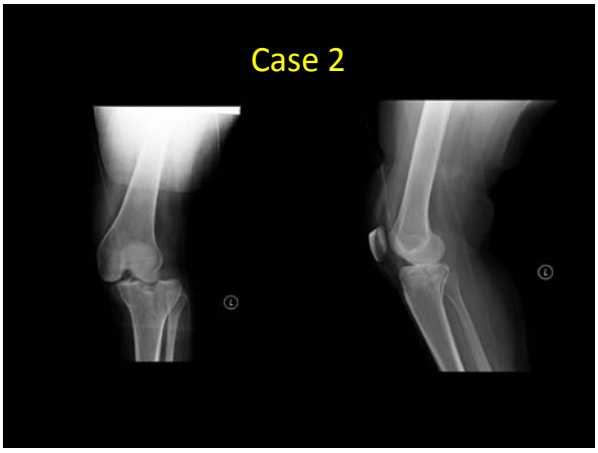




Case 2

- 38 yo female
- Ped struck
- Non-palpable but Doppler-able pulse
- ABI 0.7 in ER

Case 2

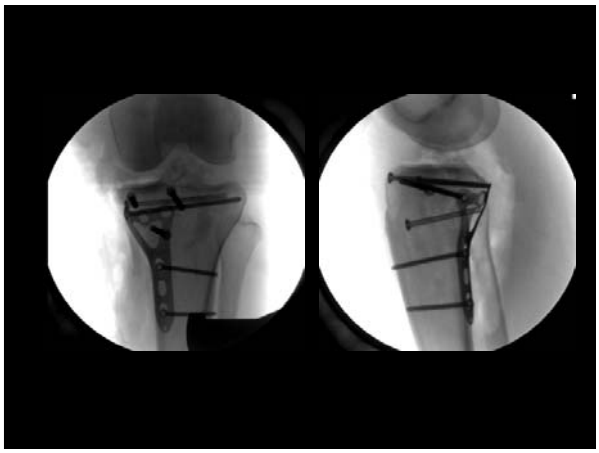


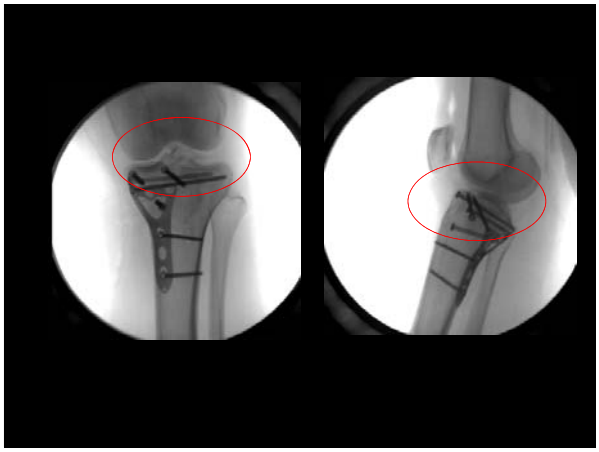
Case 2

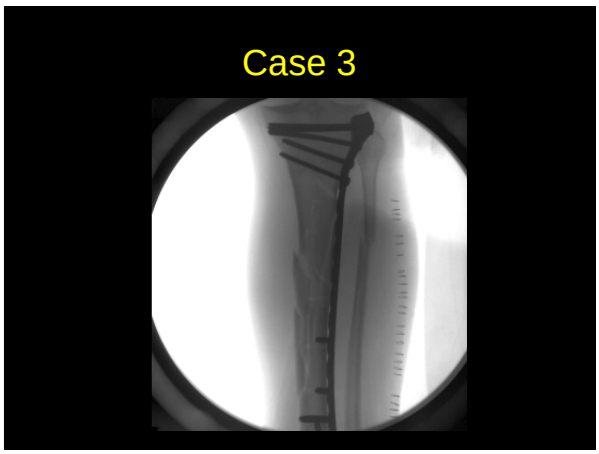
- What is the most concerning acute aspect of this case?
  - 1) Difficulty deciding definitive surgical approach
  - 2) Concerns as in knee dislocation
  - 3) Articular depression by tibial spine
  - 4) Mechanical axis maintenance
  - 5) Risk of infection after definitive care

Case 2

- What is the most concerning acute aspect of this case?
  - 1) Difficulty deciding definitive surgical approach
  - **2) Concerns as in knee dislocation**
  - 3) Articular depression by tibial spine
  - 4) Mechanical axis maintenance
  - 5) Risk of infection after definitive care







Case 3

Case 3

- What is a potential concern with this fixation?
  - 1) Inappropriate alignment
  - 2) Malreduced articular surface
  - 3) Stainless steel implant infection risk
  - 4) Potential instability
  - 5) Nothing

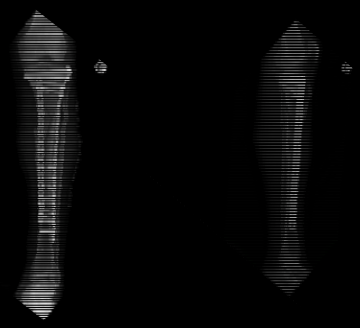
Case 3

- What is a potential concern with this fixation?
  - 1) Inappropriate alignment
  - 2) Malreduced articular surface
  - 3) Stainless steel implant infection risk
  - **4) Potential instability**
  - 5) Nothing

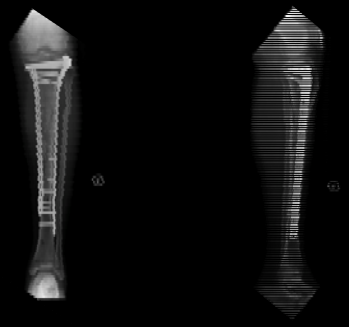
Case 3

Case 3

Case 3



5 months – Asymptomatic, “Softening of Fx Lines”



Case 4 - FQ

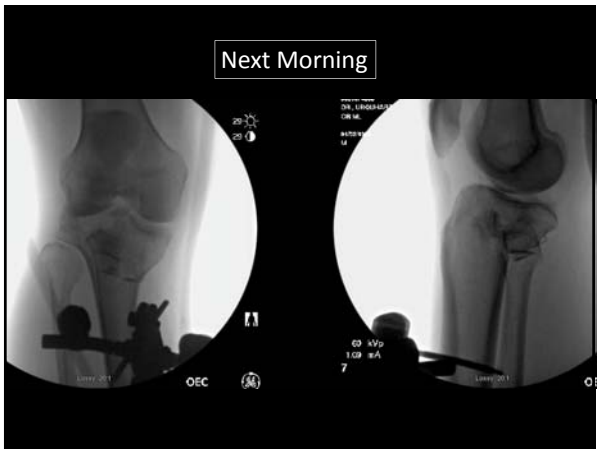
- 46 year old male s/p fall 20 feet on construction site
- PMH: HTN
- PSH: appendectomy
- Rx: Metoprolol
- Allergies: NKDA

FQ

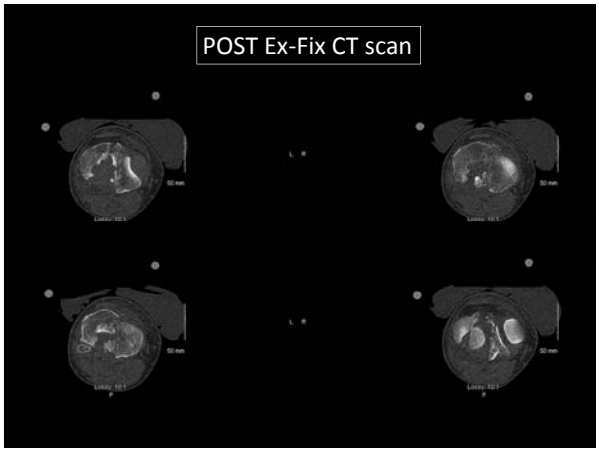
- Exam:
- DP/PT +
- Sensation intact to light touch all dermatomes
- Swollen, painful knee
- No reported hip or ankle pain
- ABI 0.9

NIGHT 1

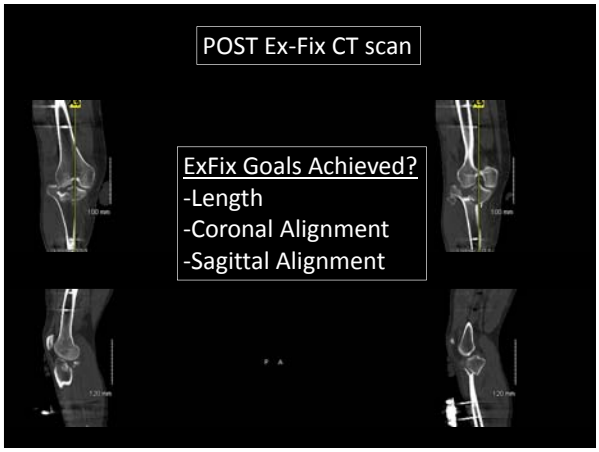
Concerns?
-Compartment Syndrome
-Vascular Injury



Next Morning
OEC

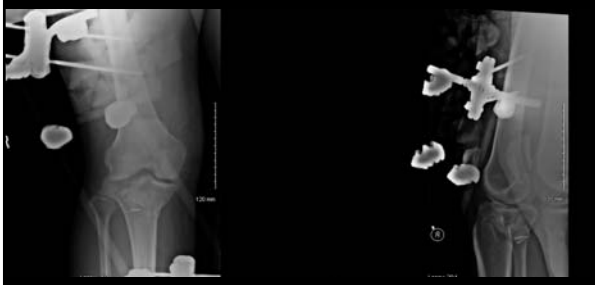


POST Ex-Fix CT scan

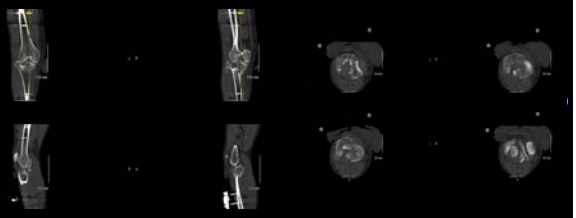


POST Ex-Fix CT scan
ExFix Goals Achieved?
-Length
-Coronal Alignment
-Sagittal Alignment

Revision Exfix



Remember CT scan?



Definitive Fixation?
-Lateral
-Medial
-Both

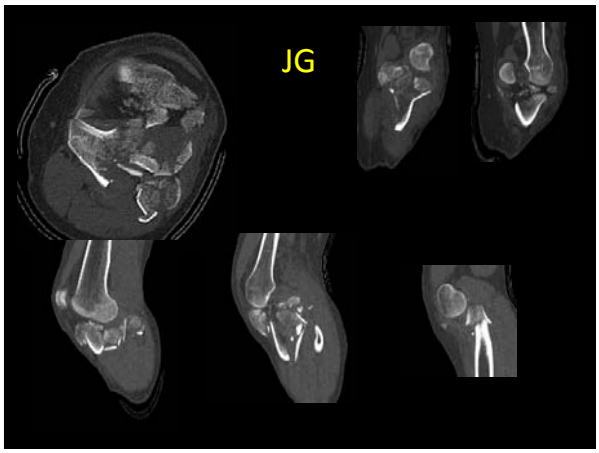
3 months

12 months – returned to construction
ROM 0-120
slight distal tip plate pain – doesn't want ROH

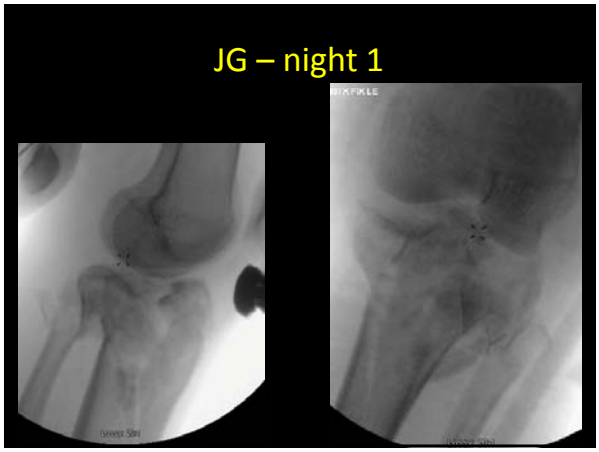
Case 5 - JG

- 22 yo female
- MVA – ejected
- + LOC
- B/L open talus and right calcaneus
- Swollen and tense L calf with PAIN!

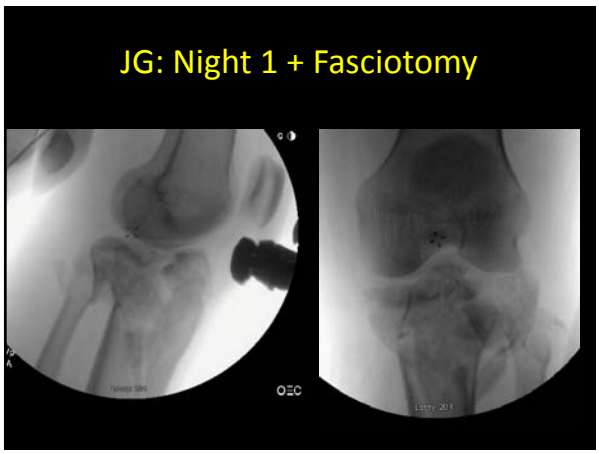
JG



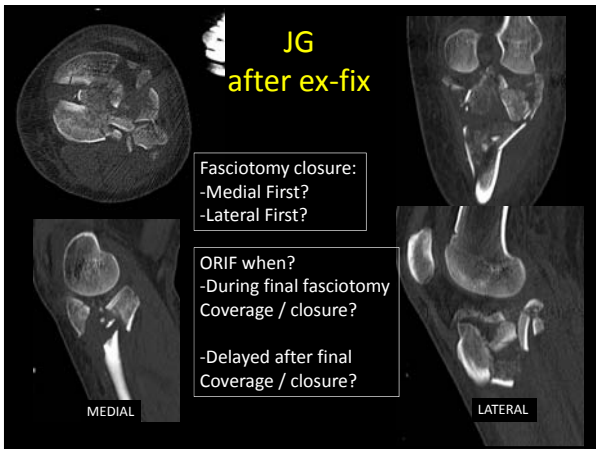
JG



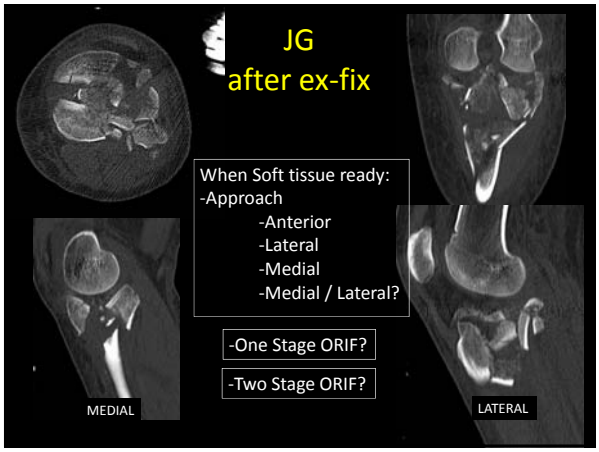
JG – night 1



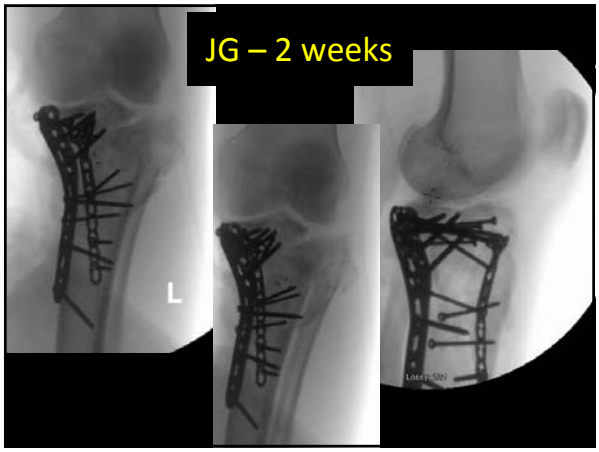
JG: Night 1 + Fasciotomy



JG
after ex-fix
Fasciotomy closure:
-Medial First?
-Lateral First?
ORIF when?
-During final fasciotomy Coverage / closure?
-Delayed after final Coverage / closure?
MEDIAL
LATERAL

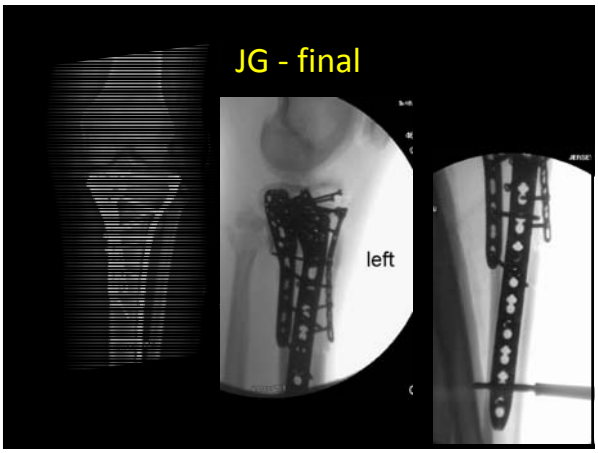


JG
after ex-fix
When Soft tissue ready:
-Approach
-Anterior
-Lateral
-Medial
-Medial / Lateral?
-One Stage ORIF?
-Two Stage ORIF?
MEDIAL
LATERAL

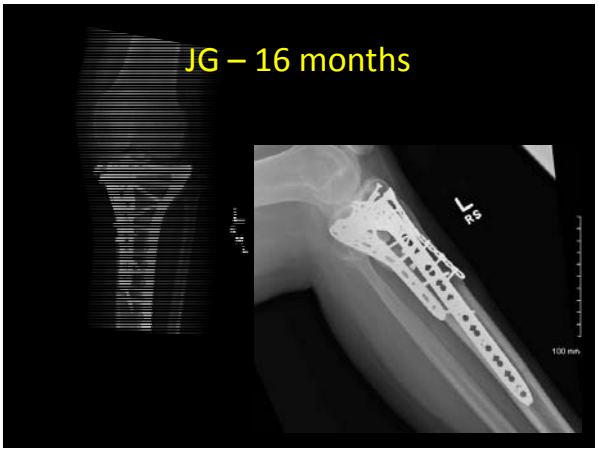


JG – 2 weeks
L

JG - final



JG – 16 months



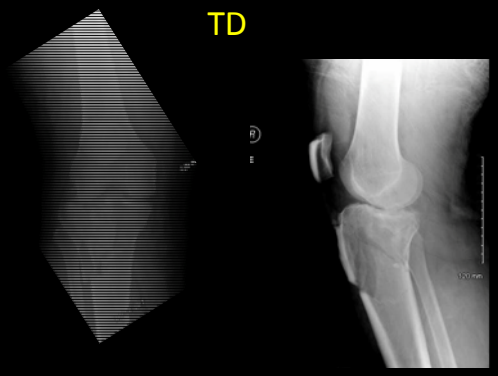
JG – 16 mo

- Needs R TTC fusion
- L ankle with some evidence AVN talus but minimal symptoms other than stiffness
- L knee:
  - No instability
  - 2-105
  - Intermittent pain at times at lateral joint line but satisfied currently

Case 6 - TD

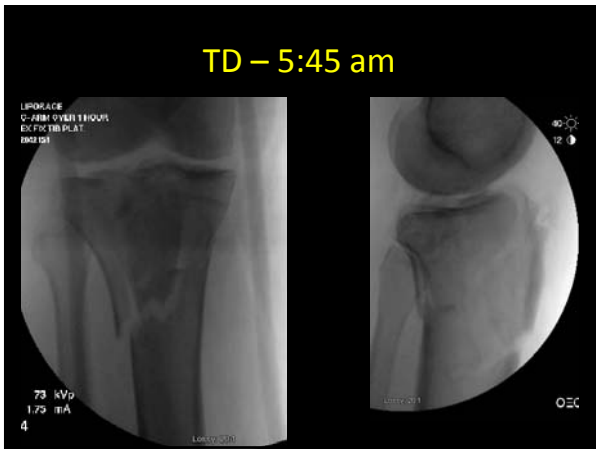
- 25 yo 350 lb male who fell after “lay-up” at 8pm
- CC: Right knee pain

TD

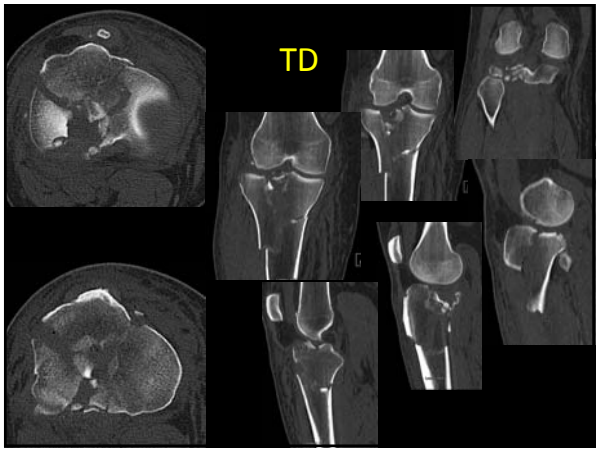


TD

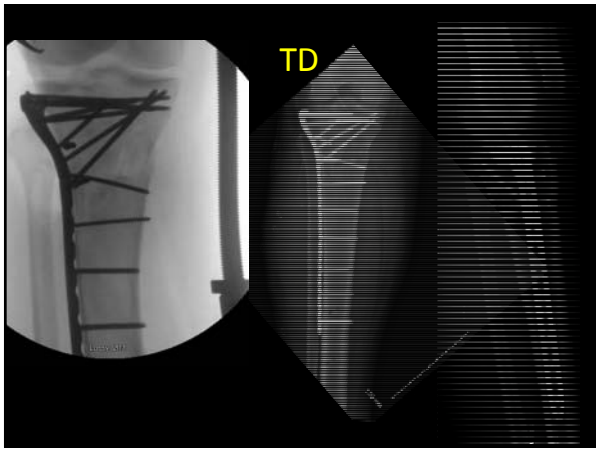
- Admitted overnight
- 3 am → “bothering staff” that he needs more pain meds
- 5am → “I can’t feel all of my toes”



TD – 5:45 am



TD



TD

TD – 10 months

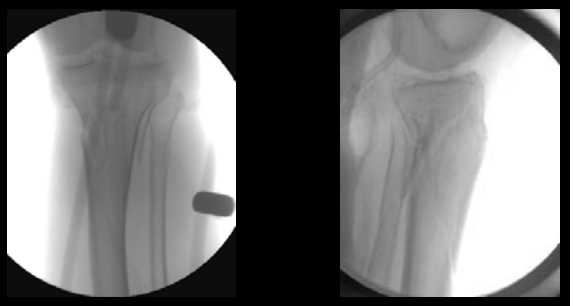
TD

- 0-120
- Mild pain over MCL
- No instability
- Back to basketball but prefers jump shot to lay-ups now

Case 7 – PR: June 30, 2007

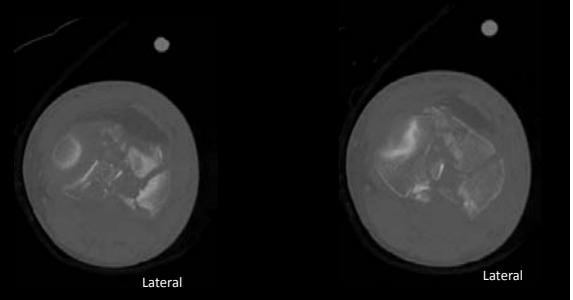
- 57 y.o. Motorcycle accident
- IDDM x 10 years
- 1ppd smoker
- Very swollen, no compartment syndrome

PR – July 1, 2007



Radiographs from FAL personal unidentified patient file

PR – July 1, 2007

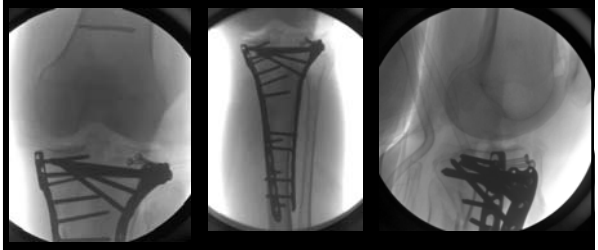


Radiographs from FAL personal unidentified patient file

PR – July 1, 2007

Radiographs from FAL personal unidentified patient file

PR – July 24, 2007



Radiographs from FAL personal unidentified patient file

PR – September 26, 2007

Radiographs from FAL personal unidentified patient file

PR – August 27, 2008

Radiographs from FAL personal unidentified patient file

PR – August 27, 2008

OUCH!!!

Radiographs from FAL personal unidentified patient file

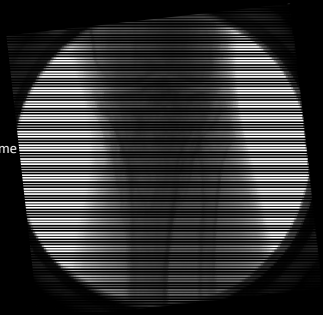
PR – September 23, 2008

H.O. resection
Knee stable intra-op

Radiographs from FAL personal unidentified patient file

PR – March 15, 2010

- ROH: ? Painful
- Also Bx at that time
- Bx NEGATIVE

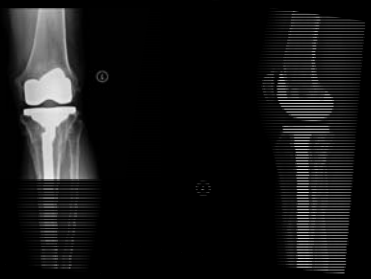


Radiographs from FAL personal unidentified patient file

PR- June 15, 2010

Radiographs from FAL personal unidentified patient file

PR- July 2013



Radiographs from FAL personal unidentified patient file

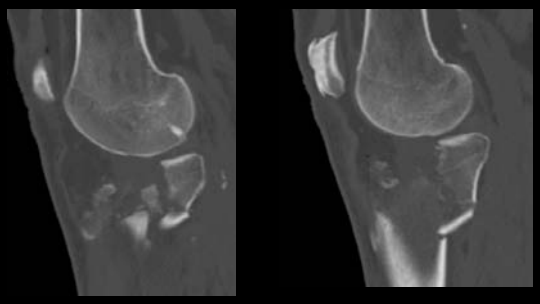
Case8: WT – December 2010

Radiographs from FAL personal unidentified patient file

WT – December 2010

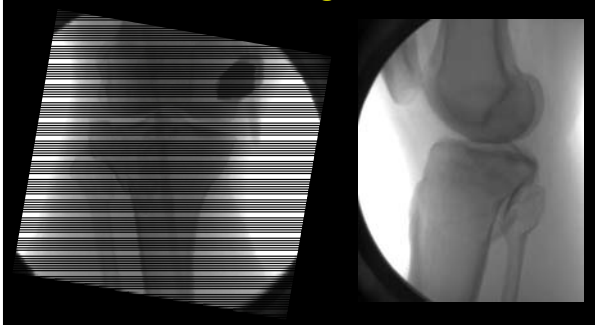
Radiographs from FAL personal unidentified patient file

WT – December 2010



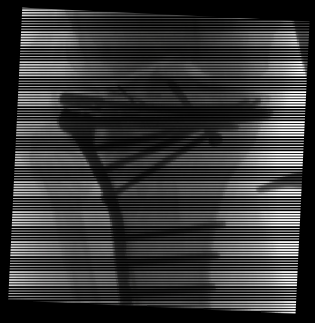
Radiographs from FAL personal unidentified patient file

WT – Night 1



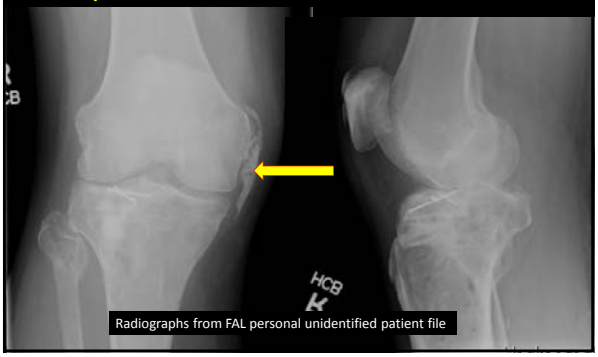
Radiographs from FAL personal unidentified patient file

WT – 2.5 weeks s/p injury



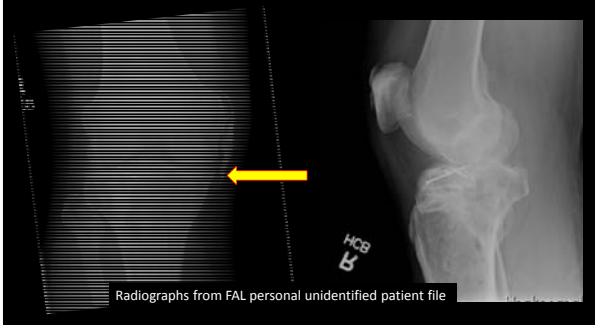
Radiographs from FAL personal unidentified patient file

WT – 11 months s/p injury, pain over plate → ROH and NEGATIVE BX



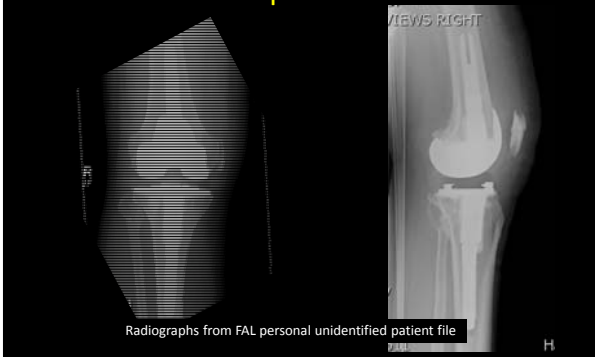
Radiographs from FAL personal unidentified patient file

WT – No change in Xrays 6 more months non-op Tx, "Too much Pain", ROM 30-85



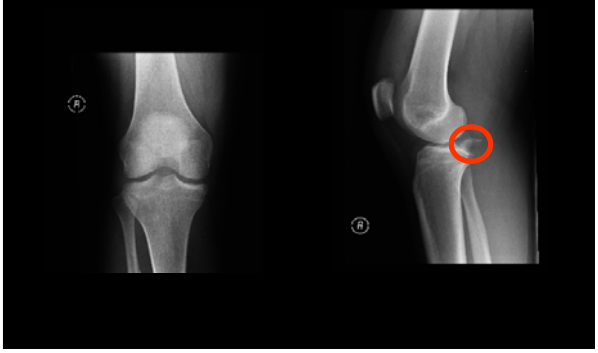
Radiographs from FAL personal unidentified patient file

WT – 1 yr s/p TKR: ROM 5-110, No pain

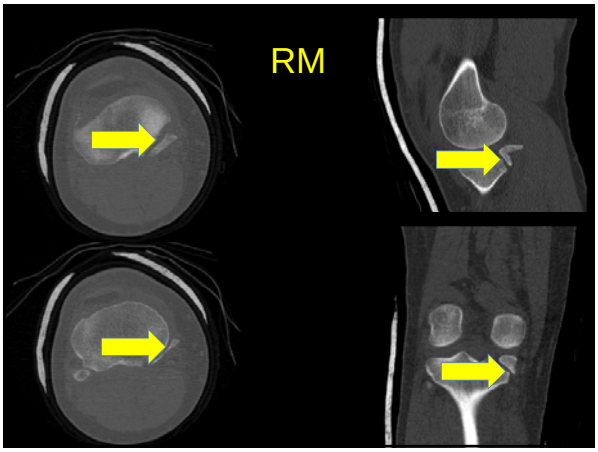


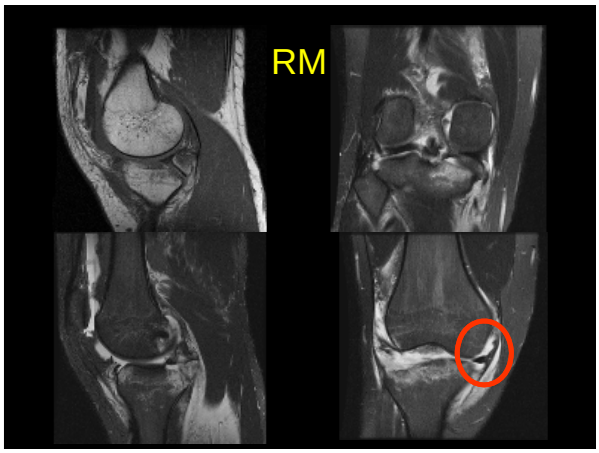
Radiographs from FAL personal unidentified patient file

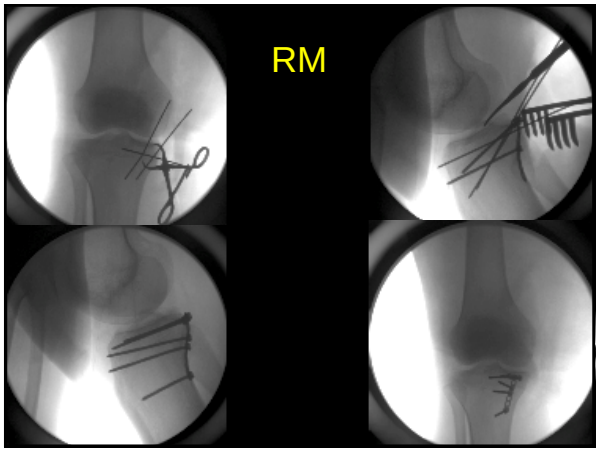
Case 9: RM



RM







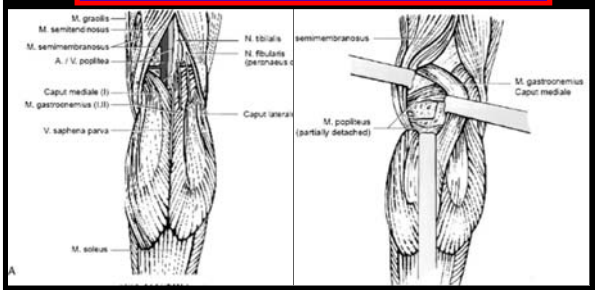
Optimizing the Management of Moore Type I Postero-Medial Split Fracture Dislocations of the Tibial Head: Description of the Lobenhoffer Approach.
Fakler, Johannes; Ryzewicz, Mark; Hartshorn, Cody; Morgan, Steven; Stahel, Philip; Smith, Wade

Journal of Orthopaedic Trauma. 21(5):330-336, May 2007.

A, Skin incision along the medial head of the gastrocnemius, not crossing the popliteal fossa. B, Incision down to the fascia.

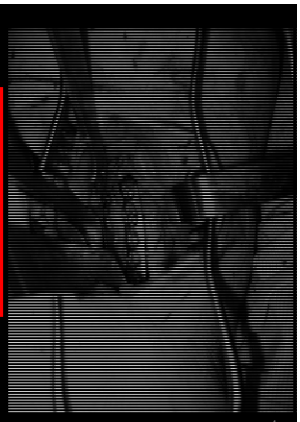
Optimizing the Management of Moore Type I Postero-Medial Split Fracture Dislocations of the Tibial Head: Description of the Lobenhoffer Approach.
Fakler, Johannes; Ryzewicz, Mark; Hartshorn, Cody; Morgan, Steven; Stahel, Philip; Smith, Wade

Journal of Orthopaedic Trauma. 21(5):330-336, May 2007.



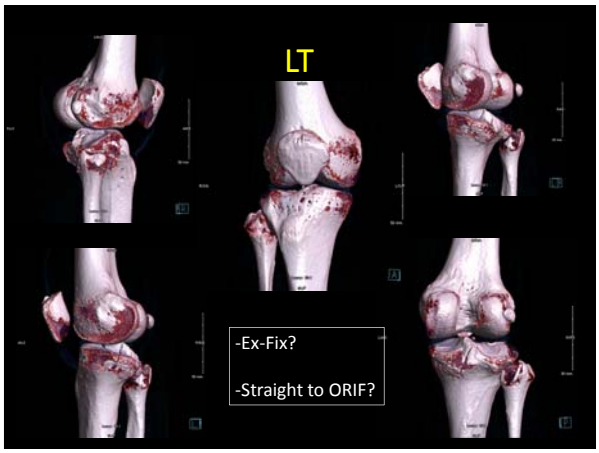
Optimizing the Management of Moore Type I Postero-Medial Split Fracture Dislocations of the Tibial Head: Description of the Lobenhoffer Approach.
Fakler, Johannes; Ryzewicz, Mark; Hartshorn, Cody; Morgan, Steven; Stahel, Philip; Smith, Wade

Journal of Orthopaedic Trauma. 21(5):330-336, May 2007.

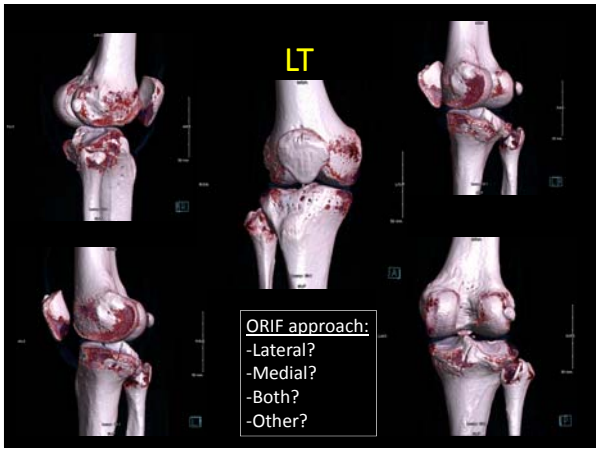


Case 10: LT

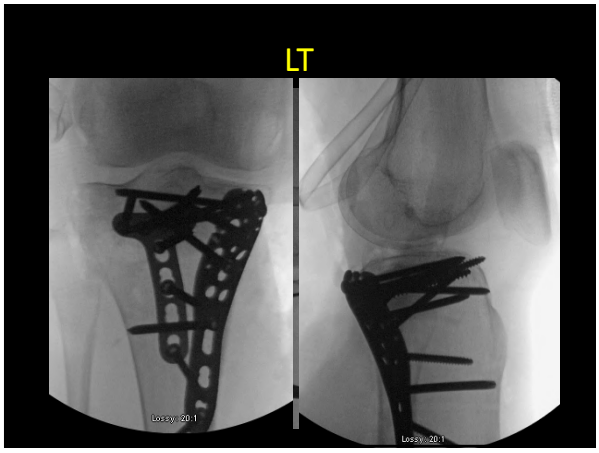
- 62 year old Healthy Female
- Fall down stairs, no prior knee pain



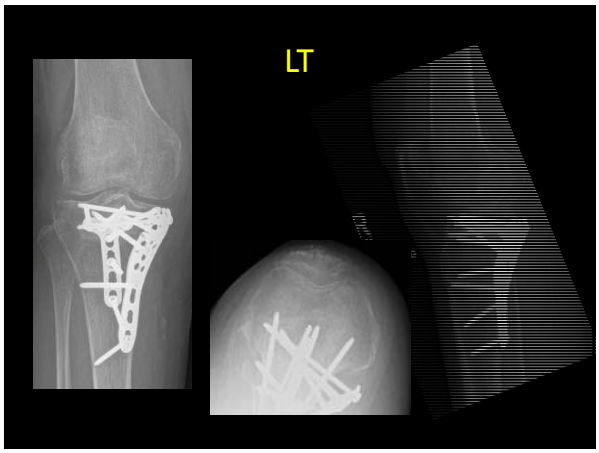
LT
-Ex-Fix?
-Straight to ORIF?



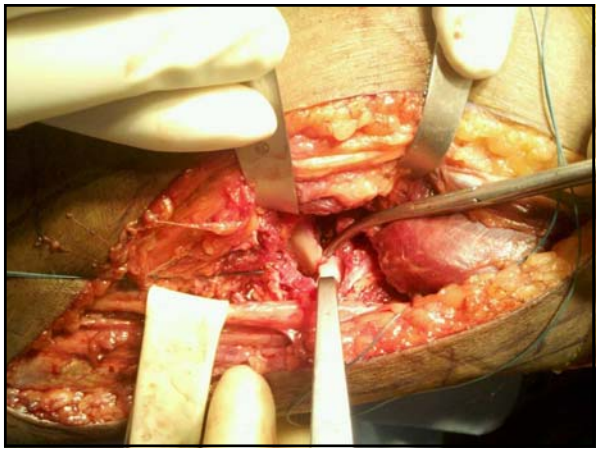
LT
ORIF approach:
-Lateral?
-Medial?
-Both?
-Other?

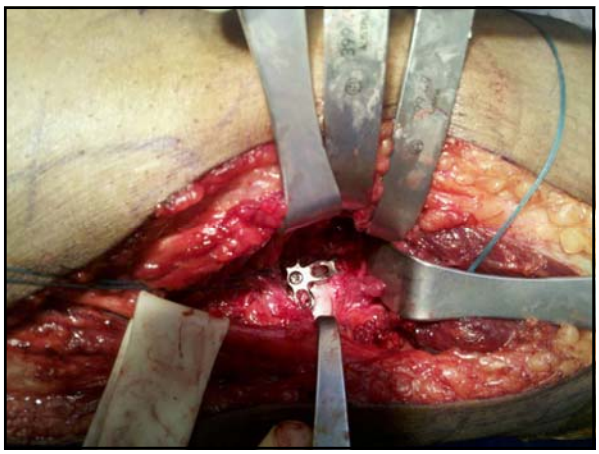


LT



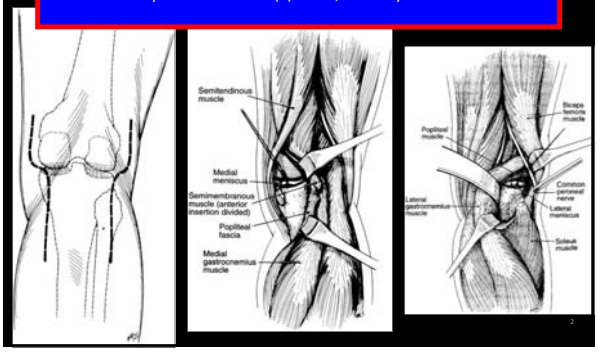
LT



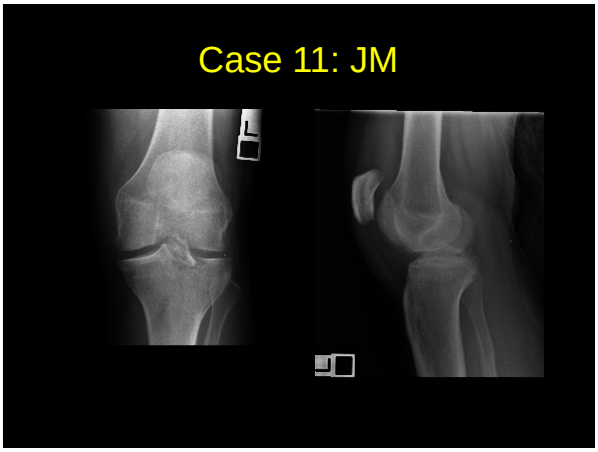


Posterior Bicondylar Tibial Plateau Fractures.
Carlson, DuWayne

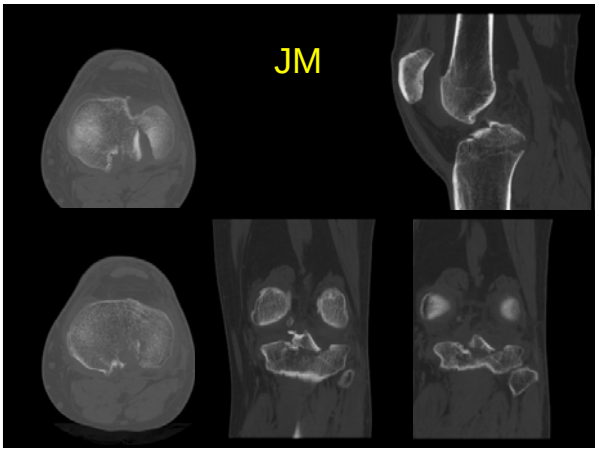
Journal of Orthopaedic Trauma. 19(2):73-78, February 2005.

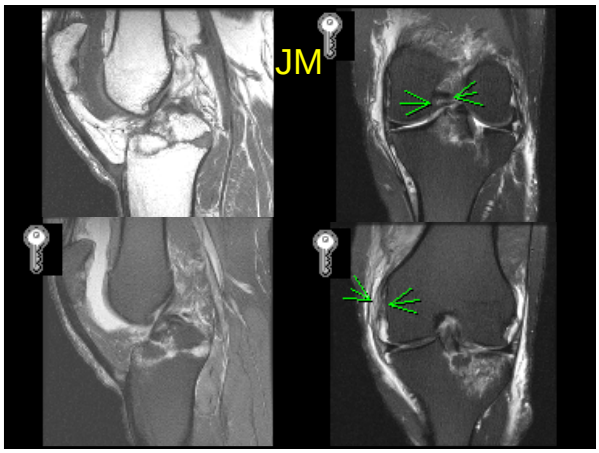


Case 11: JM

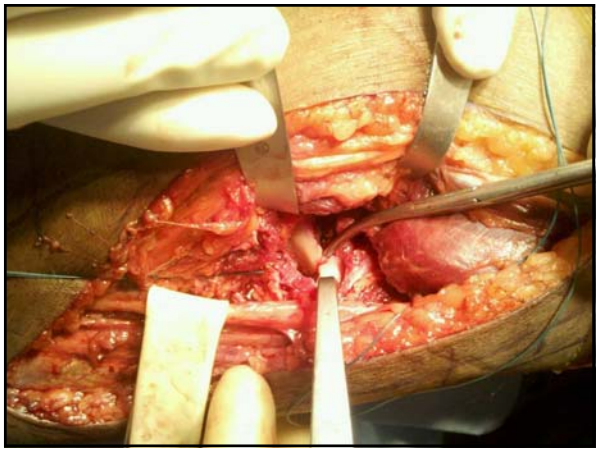


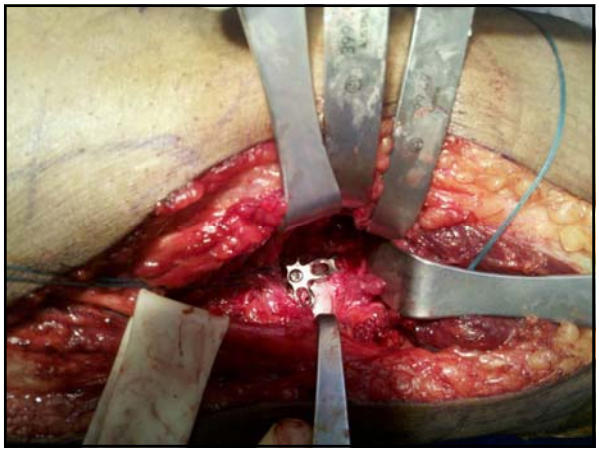
JM

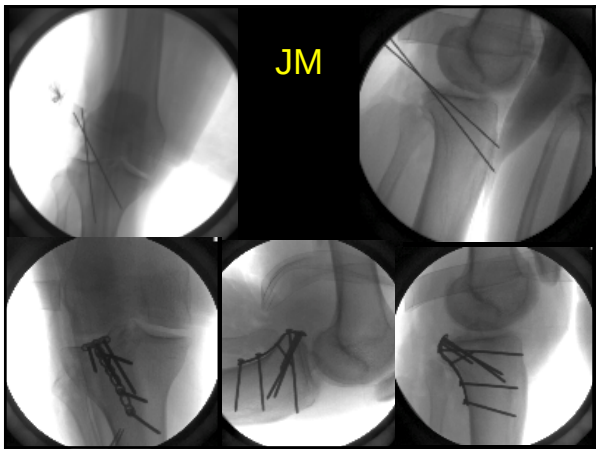




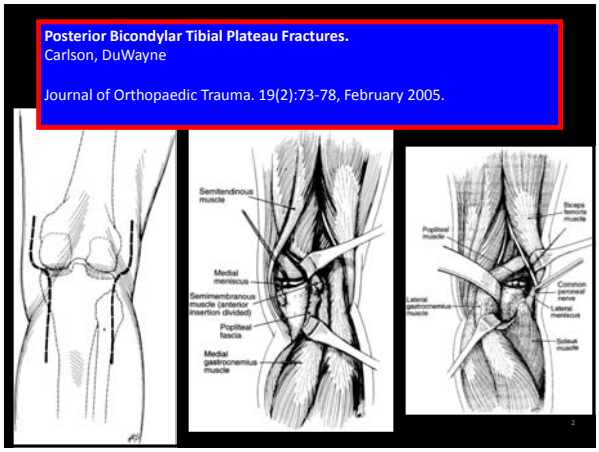
JM







JM



Posterior Bicondylar Tibial Plateau Fractures.
Carlson, DuWayne
Journal of Orthopaedic Trauma. 19(2):73-78, February 2005.
Semitendinous muscle
Medial meniscus
Semimembranous muscle (anterior insertion divided)
Popliteal fascia
Medial gastrocnemius muscle
Popliteal muscle
Biceps femoris muscle
Common peroneal nerve
Lateral meniscus
Lateral gastrocnemius muscle
Soleus muscle
